THE CUSTOMER PROBLEM

Investors move between filings, stock screens, strategy tests and personal finance tools. Professional research teams also spend time finding and reviewing disclosures across a coverage list. Anvest lets users start with a question on the home screen. AI interprets the intent, returns a relevant answer and links to the right workflow, including prepared stock screens.

THE PRODUCT TODAY

AI powers the experience across research, screening, strategy backtesting, paper trading, wealth planning and calculators. Users ask in plain English, explore explanations and continue in the relevant tool. The warehouse grounds research; dedicated engines calculate screens, backtests and planning scenarios. Educational guides support the workflow. These tools are live.

FIRST REVENUE TEST

Start with paid professional research pilots for registered analysts, PMS and advisory teams. Planned Desk pricing: Rs. 2,999 per seat per month. The broader retail toolkit supports learning, retention and a future subscription opportunity. We will measure cross-tool use and conversion before scaling acquisition.

WHY ANVEST CAN COMPETE

The foundation combines structured financial data, filing ingestion, OCR, entity resolution and a repair and verification pipeline. Screener AI and other established tools are direct alternatives. The advantage must show up in task accuracy, useful coverage, time saved and fully loaded cost, rather than in the number of features.

EARLY EVIDENCE AND THIS ROUND

About 100 registered users, all organic, with no paid marketing. Activation, week-4 return and willingness to pay are being measured. Next 90 days: paid professional pilots, live filing alerts and improvements to reliability. The broader platform is built; paid demand and retention remain to be proven.

FOUNDER

Harsh Bhardwaj: Senior Engineering Lead at New Relic, working on agentic LLM systems; seven years in backend and distributed systems; B.Tech, IIT Guwahati. Built Anvest over twelve months without outside capital. The round adds customer-facing and data-engineering capacity first.

LONGER-TERM EXPANSION

Deepen education and wealth-planning workflows after retention and renewals. Explore broker-connected execution and algo trading, then licensed wealth services or brokerage, only with customer demand, appropriate approvals and a separate business case. International expansion is another option. Future businesses are excluded from this round's revenue model and budget.

THE ASK

$400K base, room to $700K, at a $3.5M post-money cap. Convertible instrument (CCD/CCPS), exact form confirmed with counsel. Funds 15-18 months: three hires, reliability, scaled serving, compliance and paid pilots. Current month-15 planning case: 30 professional teams (~150 seats), 450 retail subscribers and ~Rs. 4.3 lakh net MRR. These are modelled targets, subject to pilot evidence.
