~49K
announcements/month, Q2 FY27

50 / 50
filings: revenue/PAT matched NSE XBRL

THE PROBLEM

The warehouse records **~49,000 announcements/month** in Q2 FY27. 3,900 SEBI-registered firms and serious investors still read them by hand, often as scans, and jump between screeners, backtesters and spreadsheets, while chatbots can invent figures. They lack a trustworthy way to turn information into a decision.

THE PRODUCT, LIVE TODAY

One AI across research, testing and planning. Answers show the filings they draw on; if the data isn't there, Anvest says so.

Ask · Screen · Backtest · Practise · Execute: after approvals

- Cited AI research, natural-language screener, 6K+ stock pages; 6,119 warehouse AI profiles
- Backtests with Indian costs; paper trading and journal
- IPO hub, fund X-ray, bonds, wealth and stress simulators
- Verified 19 Oct 2026: question → 516-stock screen → costed backtest → paper basket

WHY NOW

- **AI can read filings**, but only verified, citable data earns trust.
- **SEBI has set the algo rules** (all brokers from 1 Apr 2026): black-box providers must be RAs and exchange-empanelled.
- **Brokers are agent-native:** Kite MCP and peers expose accounts to AI agents.
- **Algorithms drive 54% of NSE cash turnover;** Anvest serves the pre-trade research and testing layer.

THE MOAT

15,899 cash-flow rows recovered from malformed XBRL; **3,608** conflicting source figures flagged across 1,022 companies; OCR for scanned filings (10 of 10 tier-1 bank results in a Q1 FY27 sample). The chatbot is replaceable; the verified corpus is not.

WHY CUSTOMERS CHOOSE ANVEST

Trendlyne and Tijori offer AI screeners; Screener.in meters AI credits; Streak runs technical strategies via Zerodha. Anvest carries one question from cited evidence to a screen, a costed backtest and a paper trade, with planning in the same account.

MARKET

$1.3B / yr — TAM: 4.6 Cr active NSE clients on Plus + 3.55 lakh professionals on Desk

$250M / yr — SAM: active investors ₹2,292 Cr + professionals ₹78 Cr. Professionals are the entry; investors the scale.

$2.4M ARR — Year-5 scenario: Series A, approvals and contracts required. Desk expands beyond the initial professional segment.

REVENUE: TWO ENGINES NOW, TWO TO SCALE

Desk · first revenue
₹2,999 / seat / month
RAs, IAs, PMS and distributors; 1–5+ seats, paying from month 3

Intelligence API and MCP
Tiered per active user
Brokers, wealth apps, AI agents; first paid partner month 10

₹199–₹599 / month (launch)
Self-serve: 150–600 AI questions a month, backtests, alerts

Strategies and algo
Subscription + revenue share
Via partner brokers, after RA registration and empanelment

TRACTION AND TEAM

Built and live in 12 months with no outside capital or marketing: 31 registered accounts, 418 queries and 238 saved backtests (20 Oct, including founder/testing); nightly ingestion of prices, filings, NAVs and news.

Harsh Bhardwaj, Founder (full-time from round close): IIT Guwahati; Senior Engineering Lead on production agentic LLM systems; seven years in backend systems (New Relic, Shiprocket, Weave, JLR). Hires: growth lead, data engineer, full-stack/quant engineer, second seller.

THE ASK

Raising $500K at a $3.5M post-money cap

CCD/CCPS, identical terms; first close $400K, room to $700K. Team $185K · compliance and infra $65K · growth and founder $100K · reserve $150K.

₹87 L — ARR run-rate at month 15

77 — Desk teams, 2 paid partners

RA — registration and public benchmark

M42 — break-even, no new funding

₹1.06 Cr — ARR at month 15 with $700K

~₹23 Cr — year-5 scenario ARR

Sources: Anvest warehouse; NSE Market Pulse (Dec 2025, Jul–Aug 2026); SEBI intermediary directory (Oct 2026); SEBI retail algo circulars (Feb and Sep 2025). Figures come from the operating model: targets and a conditional scenario, not forecasts. Q2 FY27 announcement counts: Jul 45,997; Aug 61,875; Sep 38,558. The 50-filing audit tests extraction, not full answers. Launch pricing. Planning FX ₹95/$.
