THE OPPORTUNITY, FROM YOUR SIDE

Your users own companies. Few read what they file

~49,000

announcements/month, Q2 FY27

Results, pledges and board notices land on the exchanges daily. The filing behind a price move seldom reaches the user who holds the stock.

What, not why

is all a ratio table can say

Charts and ratios show what changed. Why it changed still sits in a PDF the user has to find and read.

Explained

research backed by sources

SEBI's AI-disclosure rules make transparent research important. Anvest links filing answers to their source evidence.

The broker that best explains its users' holdings earns their trust and their daily attention.

Warehouse, announcement date: Jul 45,997 · Aug 61,875 · Sep 38,558 (2026) · Q2 FY27 average 48,810/month · SEBI AI-disclosure amendments, Dec 2024

WHAT WE BRING

A grounded answer, not another dashboard

“How did TCS's operating margin change last quarter?”

SOURCE-CHECKED RESULTS · Q2 FY27

Operating margin 25.47%, down 67 bps YoY. Revenue ₹73,188 Cr and PAT ₹13,934 Cr. Net margin 18.70% uses total income of ₹74,525 Cr (Q2 FY27, consolidated).

Source: Q2 FY27 results, NSE, filed 8 Oct 2026 →

Numbers are read from the warehouse. The model never calculates.

A full-universe warehouse, already built

6K+ NSE/BSE companies with filings OCR'd and indexed: a data-engineering investment your team would otherwise fund.

Grounded or silent

If coverage is missing, Anvest says so rather than estimating: the property that matters most when your logo is beside the answer.

Portfolio-aware, on a read-only link

Answers ranked by what the user owns, through your approved API, with token handling agreed with you.

From answer to action

Answers link to prepared screens, backtests with real costs and paper trading.

THE INTEGRATION

Kite MCP opened the door. Anvest adds the research

Kite Connect exposes account data to authorised software, and Kite MCP makes it readable by AI agents. Anvest is built to sit exactly behind that interface.

Live account link

Kite Connect / Kite MCP

Holdings, positions and orders: read-only and user-authorised, on terms agreed with you.

Grounded reasoning layer

Anvest warehouse + retrieval

Every holding is matched to the filing that explains it, which turns generic research into personal research.

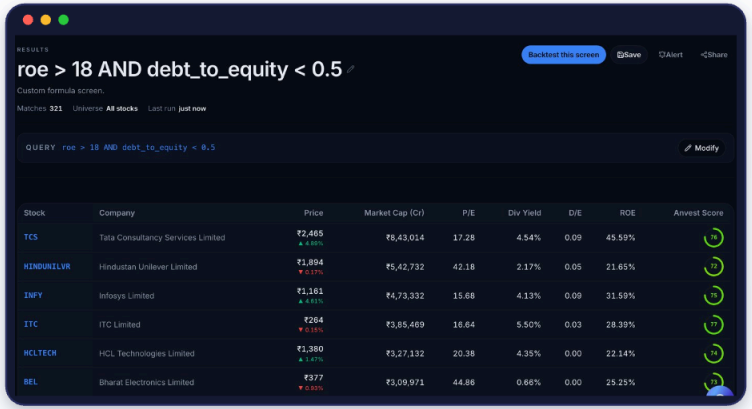

Agent-native surface

Your assistant, or a user's own agent

An AI agent asks Anvest about a position it already sees and gets a cited answer, not a guess.

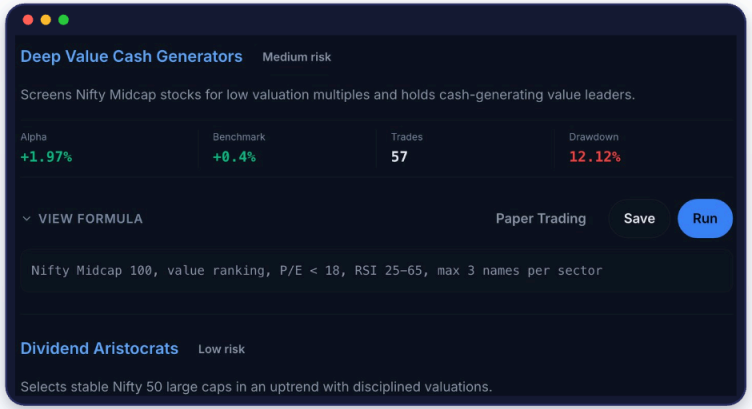

A user asks their Kite-connected assistant: **“What did the companies I hold disclose this week?”** The answer comes from Anvest's filing-grounded warehouse, with each point cited to its filing.

From insight to disciplined action

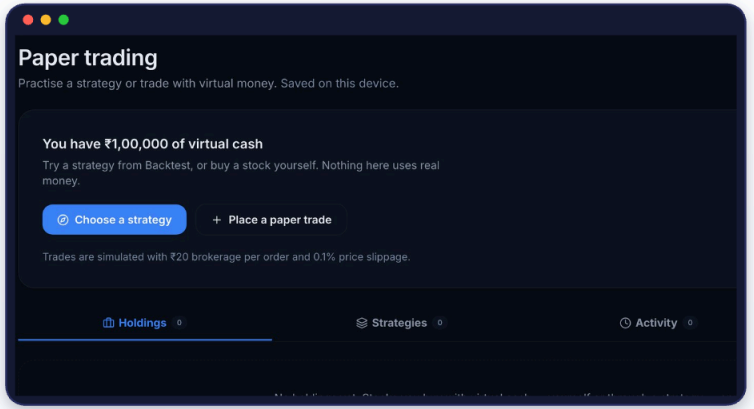

Screens users can test

Natural-language criteria become editable filters across 6K+ companies.

Backtests with real Indian costs

Brokerage, STT, stamp duty and slippage built in, with the formula visible.

Practice before real money

Paper-trade a strategy with virtual cash and keep a journal of every decision.

Under SEBI's retail algo framework, tested strategies could later run on your platform as exchange-registered algos, inside your risk controls, subject to empanelment and approvals.

Partnering is the faster path to an AI research layer

	Build in-house	Partner with Anvest
Time to launch	About a year of ingestion, OCR and verification work	**A pilot in weeks, on a live system**
Data engine	A new team and new pipelines	**6K+ companies, 2.94M announcements and 1.35M indexed passages, refreshed nightly**
Edge cases	Rediscover malformed XBRL, Q4-only annual figures and scanned PDFs	**Already solved in production**
Accountability	Build citation and verification from scratch	**Grounded or silent, by design**
Your research surface	Unchanged	**Complemented: your ratios and charts show what changed; Anvest answers why**

A scoped pilot measures exactly this, on answer accuracy, citation quality, coverage of difficult filings and cost per answer, so the decision rests on evidence.

WHERE WE ARE

Built, live and ready to pilot

SHIPPED AND LIVE

- Full-universe filings warehouse, nightly ingestion
- OCR and vector index over filings
- Grounded copilot with verify-and-repair loops
- Natural-language stock screener
- Backtesting and paper trading
- Portfolio X-ray on a read-only broker link
- IPO, mutual fund and bond analytics
- Wealth planning and calculators

Live — anvest.in on Google Cloud (Mumbai) and Vercel

Nightly — prices, filings, NAVs and news

Read-only — Zerodha and Groww link pattern built; partner access agreed with you

No tips — no target prices: research, explained and cited

Next 90 days: live filing alerts · broker-connected portfolios · professional seats

PARTNER VALUE

What your users and your business gain

A daily reason to open the app

A digest of what each holding disclosed, grounded in filings rather than price alerts, with the source one tap away.

Trust you can show

Answers traceable to filings, with gaps disclosed. Research your compliance team can stand behind.

Ready for AI agents

A grounded research layer for Kite MCP and assistants, ahead of the shift to agent-native investing.

Investors who test first

Screens, backtests and paper trading let users check assumptions and scenarios before they risk money.

Whether users value each of these is exactly what the pilot measures.

THE PROPOSAL

A scoped pilot, not a big commitment

8–12 weeks · a small opted-in cohort of your users · read-only · success criteria agreed up front

8–12 weeks

PILOT WINDOW

A small opted-in cohort. Dates and cohort size set together.

Read-only

ACCESS PATH

Your approved API or sandbox. Token handling and approvals agreed up front; no unofficial access.

3 metrics

SUCCESS CRITERIA

Accuracy and citation quality · weekly repeat use · cost per answered question.

IF THE RESULTS JUSTIFY IT

Commercial terms follow the evidence: a per-active-user licence, API usage pricing or a white-label research layer. Nothing about equity is part of this proposal.

Kite MCP means you are already building for an agent-native brokerage.

Anvest is the grounded research layer that future needs.

Let's scope a pilot inside your product.
