THE PROBLEM & OUR EARNED INSIGHT

Research teams move between exchange filings, summary screeners, spreadsheets and backtest tools. Machine-readable filings can still have period and tagging problems; many disclosures also arrive as scanned PDFs.

Anvest's ingestion pipeline has **recovered 15,899 cash-flow rows** from malformed XBRL and **flagged 3,608 conflicting figures** across 1,022 companies. A production audit counted 6,155,194 indexed passages across 633,688 distinct document IDs on 20 Oct 2026.

THE PRODUCT (LIVE AT ANVEST.IN)

Filing answers link to their evidence; unsupported coverage is stated. Deterministic code performs calculations.

Ask (Cited) · Screen (Rules) · Backtest (Costed) · Practise (Paper)

Live execution: future, subject to approvals

- Filing-cited research, transparent stock screens and Indian-cost backtests
- Paper trading, IPO documents, mutual-fund comparisons, bonds and planning tools
- Usage snapshot, 20 Oct: 31 accounts, 418 logged research rows and 238 saved backtest records; internal/testing activity is included

WHY NOW

- SEBI's December 2024 research-analyst amendments address disclosure of the extent of AI use in research.
- The retail algo framework applies to brokers from 1 Apr 2026, with specific requirements for live algos and black-box providers. Anvest backtests and paper trading are simulations today.
- These rules shape our product and partner roadmap; they do not establish demand or regulatory approval for Anvest.

PRODUCT POSITION

Anvest combines filing citations, screening, costed backtests and paper workflows in one product. A review of public product pages on 19 Oct 2026 was directional, not a hands-on benchmark; a feature not shown publicly is not assumed unavailable.

MARKET

$1.3B / yr — Model TAM: individual investors and financial professionals at list prices.

$250M / yr — Model SAM: ₹2,292 Cr active retail segment and ₹78 Cr professional segment; initial professional SAM is 21,750 seats.

₹23.11 Cr ARR — Year-five scenario; assumes Series A funding, approvals, partner access and signed contracts.

BUSINESS MODEL — ACT I (SEED) & ACT II (SERIES A)

Anvest Desk · 75% of M15 ARR
₹2999 / seat / month

Broker & Wealth APIs · 20% of M15
Tiered per active user
Model assumes 2 paid partners by M15.

Plus & Pro · 5% of M15 ARR
Individual subscriptions
Self-serve subscriptions are a modeled revenue stream.

Act II: Model portfolios
₹250/mo + rev share
Model launch M22, after regulatory and partner gates.

TRACTION & FOUNDER

Pre-revenue. Built in 12 months without outside capital. The 20 Oct snapshot has 31 registered accounts, 418 logged research rows across 16 accounts and 238 saved backtest records; these totals include founder/testing activity and other internal activity. Separately, revenue and PAT extraction matched 50 of 50 consolidated Q2 FY27 NSE XBRL filings; this is not an AI-answer accuracy score.

Harsh Bhardwaj, Founder & CEO: IIT Guwahati; Senior Engineering Lead on production multi-agent LLM systems; seven years in distributed backends (New Relic, Shiprocket, Weave, JLR). Currently employed; full-time on Anvest from round close.

THE ASK

Raising $500K at a $3.5M post-money cap

Proposed CCD/CCPS, subject to counsel. First close $400K; room to $700K. Team $185K (37%) · compliance & infrastructure $65K (13%) · growth & founder $100K (20%) · reserve $150K (30%). RA work and public evaluation remain targets.
