Anvest

Filing-cited research for Indian brokerage users

Cited answers from company filings, with an integration path to scope subject to partner approval.

6K+
listed companies

2.94M
corporate announcements

6.16M
indexed filing passages

Prepared for discussion · Version 1 Nov 2026

Harsh Bhardwaj, Founder · harsh@anvest.in · anvest.in

THE OPPORTUNITY, FROM YOUR SIDE

Your users own companies. Few read what they file

~49,000

announcements/month, Q2 FY27

Results, pledges and board notices land on the exchanges daily. The filing behind a price move seldom reaches the user who holds the stock.

What, not why

is all a ratio table can say

Charts and ratios show what changed. Why it changed still sits in a PDF the user has to find and read.

Explained

research backed by sources

SEBI's AI-disclosure rules make transparent research important. Anvest links filing answers to their source evidence.

The broker that best explains its users' holdings earns their trust and their daily attention.

Warehouse, announcement date: Jul 45,997 · Aug 61,875 · Sep 38,558 (2026) · Q2 FY27 average 48,810/month · SEBI AI-disclosure amendments, Dec 2024

WHAT WE BRING

A grounded answer, not another dashboard

“How did TCS's operating margin change last quarter?”

SOURCE-CHECKED RESULTS · Q2 FY27

Operating margin 25.47%, down 67 bps YoY. Revenue ₹73,188 Cr and PAT ₹13,934 Cr. Net margin 18.70% uses total income of ₹74,525 Cr (Q2 FY27, consolidated).

Source: Q2 FY27 results, NSE, filed 8 Oct 2026 →

Numbers are read from the warehouse. The model never calculates.

Production warehouse and source audit

Production snapshot, 20 Oct 2026: 6,155,194 indexed passages across 633,688 distinct document IDs. OCR is used where filings are scanned.

Grounded or silent

If coverage is missing, Anvest says so rather than estimating: the property that matters most when your logo is beside the answer.

Potential portfolio-aware workflow

Could be scoped through a partner-approved access method, user consent and agreed data retention. No broker link is live today.

From answer to test

Answers can lead to editable screens, costed backtests and simulated paper trading. Live execution is not included.

THE INTEGRATION

A partner-approved access path would connect holdings to filing research

This is a proposed integration concept. The access method, data permissions, token handling, retention and security review would be agreed with the partner before any pilot.

Live account link

Kite Connect / Kite MCP

Any holdings access would be read-only only if approved, user-authorised and scoped in a partner agreement.

Grounded reasoning layer

Anvest warehouse + retrieval

A scoped product test could evaluate whether linked filing evidence improves research on selected holdings.

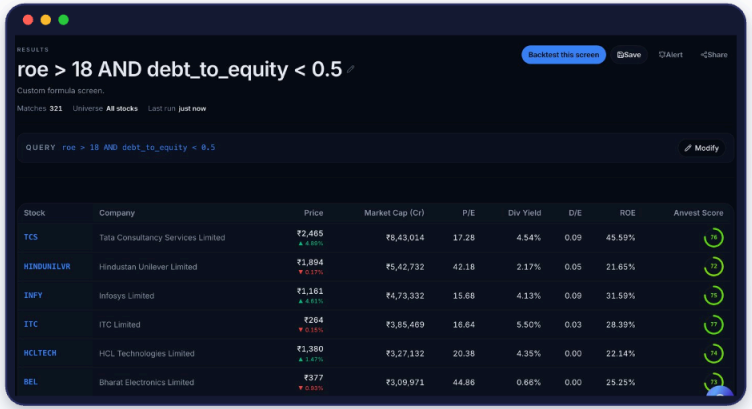

Agent-native surface

Your assistant, or a user's own agent

A future approved agent flow could request filing-cited research. No live broker integration or permission is represented.

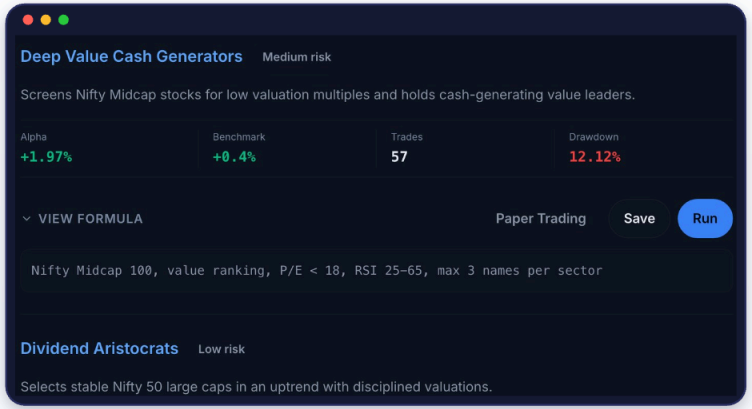

A user asks their Kite-connected assistant: **“What did the companies I hold disclose this week?”** The answer comes from Anvest's filing-grounded warehouse, with each point cited to its filing.

From insight to disciplined action

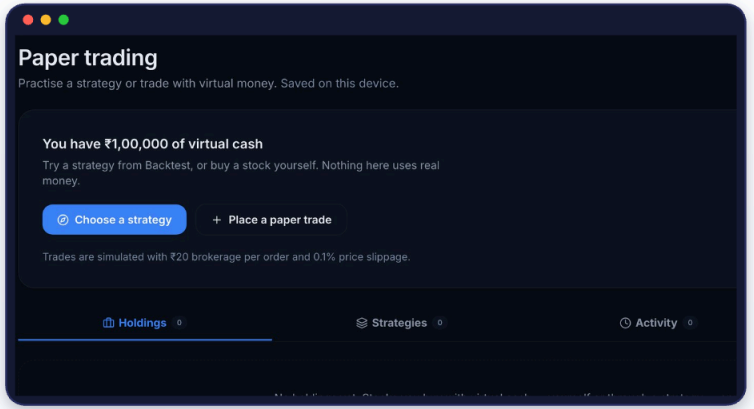

Screens users can test

Natural-language criteria become editable filters across 6K+ companies.

Backtests with real Indian costs

Brokerage, STT, stamp duty and slippage built in, with the formula visible.

Practice before real money

Paper-trade a strategy with virtual cash and keep a journal of every decision.

Under SEBI's retail algo framework, tested strategies could later run on your platform as exchange-registered algos, inside your risk controls, subject to empanelment and approvals.

A pilot could test a filing-research layer with agreed evidence criteria

	Build in-house	Partner with Anvest
Time to launch	About a year of ingestion, OCR and verification work	**A pilot in weeks, on a live system**
Data engine	A new team and new pipelines	**6K+ companies, 2.94M announcements and 6.16M indexed passages, refreshed nightly**
Edge cases	Rediscover malformed XBRL, Q4-only annual figures and scanned PDFs	**Already solved in production**
Accountability	Build citation and verification from scratch	**Grounded or silent, by design**
Your research surface	Unchanged	**Complemented: your ratios and charts show what changed; Anvest answers why**

A proposed pilot could measure answer quality, citation quality, coverage of selected filings, repeat use and cost per useful task. No pilot or success result is established.

WHERE WE ARE

Built and live; partner scope remains to be agreed

SHIPPED AND LIVE

- Production filings warehouse; ingestion runs on a schedule
- OCR and vector index over filings
- Grounded copilot with verify-and-repair loops
- Natural-language stock screener
- Backtesting and paper trading
- Portfolio tools; broker access requires an approved partner path
- IPO, mutual fund and bond analytics
- Wealth planning and calculators

Live	anvest.in on Google Cloud (Mumbai) and Vercel
Nightly	prices, filings, NAVs and news
Read-only	No broker access agreement; method and approvals remain to be scoped
No tips	no target prices: research, explained and cited

Potential next steps: filing alerts, an approved broker-access path and professional-seat testing

PARTNER VALUE

What your users and your business gain

A research use case to test

A digest of what each holding disclosed, grounded in filings rather than price alerts, with the source one tap away.

Reviewable source evidence

Answers link to filing sources and state coverage gaps. This does not establish regulatory compliance or replace partner review.

Potential assistant integration

A proposed integration could be evaluated with an approved partner access path; no existing Kite MCP integration is claimed.

Investors who test first

Screens, backtests and paper trading let users check assumptions and scenarios before they risk money.

Whether users value each of these is exactly what the pilot measures.

THE PROPOSAL

A scoped pilot, not a big commitment

8–12 weeks · a small opted-in cohort of your users · read-only · success criteria agreed up front

8–12 weeks

PILOT WINDOW

A small opted-in cohort. Dates and cohort size set together.

Read-only

ACCESS PATH

Your approved API or sandbox. Token handling and approvals agreed up front; no unofficial access.

3 metrics

SUCCESS CRITERIA

Accuracy and citation quality · weekly repeat use · cost per answered question.

IF THE RESULTS JUSTIFY IT

Commercial terms follow the evidence: a per-active-user licence, API usage pricing or a white-label research layer. Commercial terms would follow the pilot evidence. No equity request is part of this proposal.

Explore a filing-grounded research layer for Kite MCP.

Anvest could connect cited research to a partner-approved workflow.

Let's scope a pilot inside your product.
