ANVEST

The grounded AI research layer for India's 210 million retail investors.

Prepared for [INVESTOR / FIRM NAME] · Anvest Fintech Private Limited · anvest.in · September 2026

THE PROBLEM

SEBI's own FY25 study found 91% of individual F&O traders lost money — Rs. 1.06 lakh crore in net losses, up 41% year on year. The research tools that exist (Screener, Trendlyne, Tickertape) assume a user already knows what to ask. The alternative most of the other 205 million actually use is a WhatsApp tip or a chatbot that's fluent and confidently wrong on Indian filings.

WHAT ANVEST DOES

A full-universe data warehouse over Indian company filings — every NSE/BSE symbol, statutory XBRL plus OCR'd scanned filings for small caps nobody else indexes — with a conversational AI layer that answers in plain English and cites the filing it came from. If the coverage isn't there, it says so instead of inventing a number. Read-only broker link ranks answers by what the user actually owns.

THE COMPETITIVE FACT THAT MATTERS

Screener.in — the largest DIY-investor audience in India — has shipped AI over filings and **metered it at Rs. 10-30 per answer**, up to Rs. 100 for document-heavy queries. That is the strongest possible proof the category is real, and the opening: **our cost is Rs. 0.36 per answer**, because a retrieval layer does the document reading and the model receives a bounded evidence pack. Their cost scales with how many documents the model reads. Ours does not. We can include what they have to charge for.

MOAT

Twelve months of unglamorous data engineering — filing ingestion, OCR, entity resolution, a repair layer for the exchanges' own malformed filings. The chat interface took two weeks; the corpus underneath it is what a competitor actually has to rebuild, and every filing parsed widens the gap.

WHERE WE ARE

Shipped	Full-universe warehouse · OCR + vector pipeline · grounded copilot · 8 AI surfaces · a deterministic Indian tax compiler emitting schema-valid government JSON
Not yet — plainly	[N] registered users and [M] paying seats — early. Billing is being built now. Production still runs on a laptop, migration in progress. ~4,500 company-years the exchange never filed — badged, not hidden.

WHERE THIS GOES

H1 (now–18mo): own the default place an Indian retail investor goes to understand a company — subscription plus professional seats. **H2 (18–36mo):** execution under SEBI's retail-algo framework, and the first market outside India. **H3 (36mo+):** alpha lab, backtesting, and — capital markets permitting — the broker licence itself, named as the destination rather than costed into this round.

THE ASK

$3.5M post-money cap (fixed for every investor in this round) · **$400K base, room to $700K** if demand supports it · CCD/CCPS or post-money SAFE · ~2% non-cash advisor equity. 15-18 months: two hires, SEBI Research Analyst registration, and turning the pipeline into distribution.
