Anvest

Data provenance and methodology

Anvest Fintech Private Limited. Prepared for diligence. Version 1 Nov 2026. Evidence snapshot 20 Oct 2026, 12:51 IST, unless a date is given.

Anvest exists to give ordinary investors the tools an institutional desk has. For that to be safe, the data has to be right and the limits have to be stated. This memo sets out where the data comes from, how an answer is produced, what has been tested, and what is still open.

1. Data sources

- **Statutory filings and XBRL.** Results, annual reports, shareholding patterns and announcements filed with NSE and BSE under SEBI's listing rules. These are public disclosures. Commercial reuse is still subject to each source's terms and to legal review.
- **End-of-day prices.** NSE and BSE daily settlement files. Paid redistribution of price data needs exchange or vendor licensing, which the round's $65K compliance and data allocation budgets for before the paywall goes live.
- **Scanned filings.** Many statutory results arrive as scans. In a pilot of 21 NSE filings from 9 banks (Q1 FY27), all ten tier-1 statutory results were scans. The embedded text layer can be wrong while looking right, so trust is decided by how the text entered the PDF, not by how it reads.
- **Funds, bonds and offer documents.** AMFI scheme data and NAVs, government and corporate bond data including the RBI G-Sec benchmark, and IPO offer documents filed with SEBI and the exchanges.
- **Source access.** BSE's API and MCX's feed deny automated access today. Affected data is labelled or hidden rather than estimated.
- **Broker account data.** None today. Any pilot would need an approved access path, user consent, agreed retention and the partner's security review.

2. Coverage

Measure	Count	What it counts
Listed symbols	6,086	NSE and BSE symbols with a dashboard row
Stock pages in the sitemap	4,533	Counted 1 Nov 2026
Corporate announcements	29,37,136 (2.94 million)	Rows in the warehouse
Indexed passages	61,55,194	Points in the search index
Distinct document IDs	6,33,688	A different facet from passages; not a count of filings
AI company profiles	6,119	Symbols with a non-empty generated summary
Mutual fund schemes	991	Direct growth plans compared
Announcements by date	45,997 / 61,875 / 38,558	July, August, September 2026, by announcement date (average 48,810). Ingestion dates include backfills, so they do not measure supply

About 4,500 company-years have no usable exchange filing. The product says so rather than filling them.

3. What goes wrong in the source, and what we do

Failure	Real case	Treatment
FY23+ Q4 and annual XBRL dates every context with the quarter. There is no separate annual file	RELIANCE: quarter and full-year contexts both say January to March	True period read from the filing's own date facts

Cash flow is half-yearly and year-to-date, often in a context parsers reject	TCS FY21 operating cash flow of ₹38,802 Cr ties to the annual report	15,899 rows recovered, only where the block closes its own identity. None failed reconciliation
Placeholder zeros in high-priority tags	DCMFINSERV FY18: profit tag holds 0.00, the real figure sits in another tag	Zero-placeholder guard
A secondary source disagrees with the filing	ADANIPORTS FY25 profit: ₹1,09,197 Cr secondary, ₹11,092 Cr filed	3,608 conflicts flagged across 1,022 companies, 1,521 about 10× out. The filed figure is preferred
The same figures stored under two periods	ABBOTINDIA: FY25 figures appeared in the FY24 row	580 duplicate groups found. Tied periods are withheld unless their own quarters sum to them
OCR text layer wrong in place	City Union Bank Q1 FY27: 21.73 on the page, 27.73 in the text (confirmed against the bank's press release)	Render-mode and font checks decide whether the text layer can be trusted

4. How an answer is produced

Step	What happens
Interpret	The model classifies the question and resolves the company and period.
Retrieve	Evidence comes from the warehouse and the filing index, through the same services the product pages use.
Compute	Code does the arithmetic. The model does not calculate.
Validate	Numeric checks compare each figure with retrieved values. A figure that cannot be reconciled is repaired or removed before display. This reduces risk and does not prove an answer correct.
Cite	Answers link to the filing. Citations are at filing level, not page level. Screening answers show the rule rather than a citation.

Reported line items are read from the filing. Derived ratios (ROE, ROCE, debt-to-equity) go through identity checks and cross-validation, and sector rules apply: ROCE is withheld for lenders. Corrections ship as versioned releases, and point-in-time history is preserved rather than overwritten.

5. What has been tested

Test	Date	Result	Scope
Source audit	20 Oct 2026	50 of 50 matched	Revenue and profit extraction on 50 distinct consolidated Q2 FY27 NSE XBRL filings, chosen by a fixed rule and rechecked from the source files. Does not score AI answers.
Live spot-check	19 Oct 2026	3 matched, 1 correctly declined	TCS, HCL Technologies and Wipro revenue and profit against their filings. Infosys had not reported. Four questions are not a benchmark.
Signed-in journey	19 Oct 2026	Completed end to end	Question to screen to one-year costed backtest to paper basket, plus a retirement plan checked by hand. Issues found were logged and handled separately.
50-question evaluation	Not run	No result yet	Questions are written across filing scope, scans, malformed XBRL, sector rules and advice boundaries. It will be run on a released build and published with its date. A skipped or errored case counts as a failure.

6. Regulatory position

Area	Position
Advice boundary	Product rules, not only disclaimers: no buy, sell or hold calls, no target prices, no personalised investment advice. Planning tools do arithmetic on the user's own inputs and do not name securities.
RA and IA registration	Neither is held today. RA registration is funded in this round. Personal portfolio recommendations would need adviser registration and a separate decision. Counsel confirms the product's position.
AI in research	SEBI's December 2024 amendments require registered RAs and IAs to disclose AI use and hold them solely responsible for its output. Anvest shows sources and assumptions so a registered customer can review them; that does not itself establish compliance. SEBI RA Regulations.
Retail algos	The framework applies to all brokers from 1 April 2026. Black-box providers need RA registration and exchange empanelment. Anvest's backtests and paper trading are simulations; live strategies would need legal review, partner-broker controls and approvals. SEBI circular.

7. Open items at 1 November 2026

Item	State	Next step
Full warehouse restore	Encrypted off-site backups run on schedule with integrity checks. A full restore of the migrated warehouse has not been drilled.	Timed restore to a separate instance, using the offline key
AI release	The production AI is the 21 October build, with the deeper analyst tier switched off. Later builds are held behind a sealed evaluation.	Release once the evaluation passes
Nightly pipeline	12 of the last 14 runs were marked failed, mainly by one segment-extraction stage and a held source. A failed stage marks the whole run. Prices and features stayed current through 30 Oct.	Deploy the prepared fixes and confirm clean runs
Margin label	Answers label profit before exceptional items and tax over revenue as "operating margin" (TCS Q2 FY27: 25.47%). TCS reports an EBIT margin of about 24.0%.	Relabel in the next release
Citations and concalls	Citations stop at filing level, and concall coverage is thin.	Months 13 to 18 in the plan
Data rights	Exchange terms for paid redistribution are not yet confirmed.	Counsel, before checkout

8. Where each number in the deck comes from

Claim	Source	As of
Warehouse counts, accounts, research questions	Read-only production aggregate queries; no user identifiers exported	20 Oct 2026
India visitors, pages, search arrivals, device mix	Vercel Web Analytics, exported through its API. India only; other countries shown separately in the appendix	2 Oct to 1 Nov 2026
50 of 50 extraction match	Fixed-rule sample, source files downloaded and hashed	20 Oct 2026
Filing failures and repair counts	Internal data audits against original filings	Jul to Sep 2026

Revenue, cost, runway, market size, sensitivities	Monthly operating model; workbook available in the data room. All are planning assumptions until pilots replace them	1 Nov 2026
SEBI firm counts	SEBI intermediary directory: 2,304 RAs, 1,057 IAs, 539 PMS	19 Oct 2026
Investor and algo figures	NSE Market Pulse (Dec 2025, Jul and Aug 2026); SEBI FY25 trader study	As cited
Competitor capabilities	Vendors' public pages; press reports for funding. No paid hands-on trials yet	19 Oct, 1 Nov 2026

Version 1 Nov 2026. Questions on method or source scope: Harsh Bhardwaj, founder, harsh@anvest.in.
