# The research tools institutions use, in plain language, for every Indian investor.

Ask Anvest Intelligence a question in ordinary words. It answers from exchange filings, builds the screen, tests the idea with Indian trading costs and helps you plan the money. A first-time investor can start here. A SEBI-registered analyst can open the filing behind the answer.

**6,086**
listed symbols in the warehouse

**2.94 million**
corporate announcements

**50 of 50**
filings matched on revenue and profit extraction

**5×**
India weekly visitors in October, no marketing spend

## The problem

Institutions have analysts, terminals and quant desks. A retail investor or a two-person advisory firm has exchange PDFs (61,875 announcements in August 2026 alone), ratio screeners, spreadsheets and tips. Neither can afford the desk.

## What we learned building it

Indian filings are not machine-ready, and a model pointed at them inherits every error.

- XBRL dates a full-year column with the quarter's dates (RELIANCE Q4).
- **15,899** cash-flow rows recovered from year-to-date blocks parsers reject, none failing reconciliation.
- **3,608** source conflicts across 1,022 companies. ADANIPORTS FY25 profit: ₹1,09,197 Cr in a secondary source, ₹11,092 Cr as filed.
- 10 of 10 tier-1 bank results in a sample were scans. City Union Bank's capital adequacy reads 21.73 on the page and 27.73 in the hidden text.

## The product, live at anvest.in

**For a question:** ask, get a screen with rules you can read, backtest it with brokerage, STT, stamp duty and slippage, then paper-trade it. On 19 Oct one prompt produced a 516-stock screen, a one-year costed backtest and a 10-stock paper basket.

**For a beginner:** a portfolio simulator in everyday words, retirement and goal planners that show their assumptions, fund comparisons and IPO pages. One conversation across all of these is being built and ships once it clears evaluation.

The model reads the question; code does the arithmetic. No buy, sell or hold calls, and no target prices.

## Why now

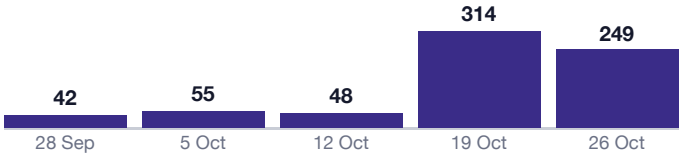

- Since Dec 2024, SEBI-registered RAs and IAs must disclose AI use and are solely responsible for its output.
- SEBI's retail algo framework applies to all brokers from 1 Apr 2026.
- Kite MCP connects accounts to AI agents, and models are now cheap enough for a free tier.
- AlphaSense passed $600M ARR at a $7.5B valuation selling source-cited research to institutions. Anvest Desk is ₹2,999 a seat a month.

## Team

**Harsh Bhardwaj, founder.** Full-time at first close. IIT Guwahati. Seven years on distributed systems at New Relic, Shiprocket, Weave and Jaguar Land Rover; senior engineering lead on production multi-agent AI. Built Anvest in twelve months with no outside capital. First hires: growth lead, data engineer, full-stack and quant engineer.

## Traction: organic, with no marketing spend

Visitors from India per week:

5.7 pages per visitor. 57% on phones. Search arrivals rose from about 1 a day to about 13 a day. By 20 Oct: 31 accounts, 5 of them ours. 13 outside accounts asked 268 of the 418 logged research questions (the rest were internal testing), and 7 asked more than once. **Pre-revenue:** checkout is not live.

## Market, sized at list prices

$1.3B total (4.6 crore active NSE clients, plus professionals). $250M reachable: active traders ₹2,292 Cr, first buyers ₹78 Cr (3,900 SEBI firms and 3,350 top distributors, 21,750 seats). The plan needs 243 seats by month 15, about 1% of that list.

## Who pays

| Plan | Price (launch) | Month-15 revenue |
|---|---|---|
| Free: public tools | ₹0 | Reach |
| Plus, Pro: individuals | ₹199–₹599 a month | 5% |
| **Desk: advisers, RAs, PMS** | ₹2,999 a seat a month | 75% |
| Partner API (none signed) | ₹15, ₹10, ₹6 a user | 20% |

Professionals pay first, which keeps the public tools open. Rule-based baskets come after RA registration and empanelment.

## Competition

Screener.in, Tijori, Trendlyne, Multibagg, Streak and Perplexity Finance each do part of this well. We found none that runs from filing to tested idea to plan in one account. Anvest is behind on broker links, page-level citations and concall answers.

## The ask

**$500K at a $3.5M post-money cap.** CCD or CCPS, to be settled with counsel. First close $400K, room to $700K.

| | |
|---|---|
| Team | $185K (37%) |
| Compliance, data, serving | $65K (13%) |
| Growth and founder | $100K (20%) |
| Runway from month 19 to break-even | $150K (30%) |

**Targets:** 10 paid pilots by month 3. ₹87 L ARR, 77 teams and a public benchmark by month 15 (₹1.06 Cr at $700K). Break-even in month 42 on plan. Any single missed assumption still leaves at least 33 months of cash.

Sources: Anvest warehouse and read-only production snapshot, 20 Oct 2026; Vercel Web Analytics, India only, 1 Nov 2026 (one-page crawler-like traffic from other countries excluded; visitors counted per day); NSE Market Pulse; SEBI directory and circulars; fintech.global. All plan figures are targets from the Anvest operating model, not forecasts. ₹95 = $1. The 50-filing audit tests extraction, not AI answers.
